In Support of
Canadian
Breast Cancer
Foundation
PRAIRIES • NWT

When you buy PinkShield™ you are supporting the search for a cure.
Cano Coatings donates 20¢ per gallon of PinkShield™ coating
sold, to the Canadian Breast Cancer Foundation.

WHY USE PinkShield™?

Actual Burn Through Test:
PinkShield coated I-joint vs. uncoated I-joint

PinkShield™ is a **FIRE RESISTANT** intumescent paint that is designed to increase the time of ignition and slow the spread of flame should a fire occur.

“When we use PinkShield, we create safer living environments for homeowners, and that’s something I can stand behind”

- Mike Holmes

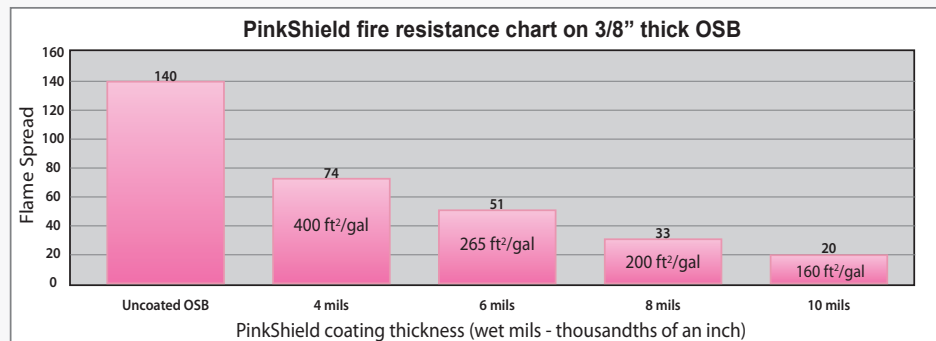

MOISTURE & MILDEW RESISTANCE

In addition to fire resistance, PinkShield™ is formulated with a special fungicide offering added performance. Once dry, the paint film resists the formation of mildew and will be less susceptible to these contaminants compared to uncoated lumber. Other wood coatings may breakdown or deteriorate with even a brief exposure to moisture. PinkShield™ has been third party tested in numerous exposure tests which include freeze thaw and water spray showing no sign of deterioration.

PROTECTING WHAT MATTERS

PinkShield™ may be sprayed, rolled or brushed onto:

- floor joists
- wood sheathing
- wood framed walls
- anywhere lumber is susceptible to fire

Cano Coatings Inc., a Calgary based company, is the proud manufacturer and supplier of **PinkShield™**. Other Cano Coatings products include:

- **PKlumber™** - fire resistant framing components
- **PKboard™** - a structural, fire-rated OSB sheathing
